Professional Summary

I am a seasoned musician and sound engineer with over 16 years of experience in audio editing, music production, and live performances. My expertise spans live and studio events, and I am proficient in using advanced DAW software to create high-quality audio content. As a professional musician since 2009, I have performed worldwide, playing piano, guitar, and singing across a variety of venues, including over 400 hotels and numerous ships. This has shaped my understanding of how sound can enhance the audience experience.

I am passionate about playing video games and I'm eager to bring my understanding of music and sound to the gaming world. I aim to contribute my expertise to create immersive, dynamic soundscapes, sound effects, and music.

As problem-solving is something I feel really involved with, I love a good challenge any day. I do like to learn new ways to expand my knowledge and workflow, therefore I don't have an ego when it comes to collaborating with my team and that's why I thrive in collaborative environments.

I believe my unique background as a live performer, coupled with my technical proficiency, makes me an ideal candidate for this role.
