

Mobeen Syed

Game Developer

Phone: (+44)7824633050 Email: mobeensyed28@gmail.com Add: Northwood, London

SUMMARY

Passionate and skilled Game Developer with expertise in Unreal Engine 5, Gameplay Ability System (GAS), and C++ programming. Experienced in designing and implementing engaging gameplay mechanics, multiplayer systems, and immersive boss encounters. Adept at optimizing game performance, creating reusable gameplay systems, and collaborating within cross-functional teams to deliver exceptional player experiences. Seeking to leverage my technical expertise and creativity to contribute to the development of innovative games.

EDUCATION & CERTIFICATIONS

Google Cloud Certified Professional Data Engineer

Jan '23

BSc (Hons) Computer Science with Robotics

Sep '15 - Jul '18

King's College London, University of London

GAME DEVELOPMENT PORTFOLIO

Various Projects that I have worked on and plan to develop in the future

[Home](#) | [My Site](#)

GAMEPLAY SHOWCASE – BOSS ENCOUNTER

A Battle showcase created using the Gameplay Ability System, C++ and Replication for Multiplayer Support

[\(1\) Fire and Blood: UE5 Boss Fight - YouTube](#)

TECHNICAL & KEY SKILLS

- **Game Development:** Gameplay Mechanics, Multiplayer Systems, AI Behaviour Trees, Animation Systems, Level Design
- **Programming Languages:** C++, Python, Blueprint Scripting
- **Game Engines:** Unreal Engine 5
- **Game Systems:** Gameplay Ability System (GAS)
- **Tools & Platforms:** Perforce, Git, Visual Studio, Rider
- **Additional Skills:** Networking (Multiplayer), Optimization, Debugging, Performance Profiling

PROFESSIONAL EXPERIENCE

Game Developer

Mar'24 - Jun '24

The Developer Academy

- Collaborated with teams of varying sizes to design and implement gameplay systems for multiple projects, including a 2D auto-scroller, a text-based adventure game, a top-down rogue-like, and a first-person horror.
- Explored the Physics engine within Unreal Engine with a third-person project to evaluate and refine collision responses, gravity simulations, and environmental interactions.
- Stress-tested gameplay systems through rigorous playtesting to identify potential breakpoints and devised effective workarounds to ensure smooth performance and stability.
- Actively participated in code reviews and debugging sessions to pinpoint performance optimizations and potential memory leaks

Big Data Engineer

Apr '22 - Nov '22

Mazataz Limited

A company that provides bespoke cloud infrastructure, design deployment, and migration services to accelerate growth in businesses using agile techniques in Devops Cloud Architecture & Design, Cyber Security, Cloud Migration, and Proof of Concept

Collaborated with a team working on the **Google Cloud Platform (GCP)** to deliver projects for clients like **Vodafone**:

- Developed a streaming pipeline using **Dataflow**, **Pubsub**, and **BigQuery** to securely deliver financial data, incorporating a trigger event using **Cloud Functions**
- Utilized **Vertex AI** and **BigQuery** to identify faults in financial data using regression algorithms
- Implemented Client-side encryption on large-scale files and manual inputs using **Google Tink**, **Docker**, and **Python** scripting

Database Manager

Feb '19 - Jun '20

AJS Marketing Ltd

A Wholesale Distribution Company of perfume and cosmetics

- Developed an inventory management system using **MySQL** to track stocks, orders, and sales records
- Utilized **SQL** and **Python** programming for creating and maintaining a **relational database**
- Employed **SQL** for **data analytics** to determine market trends, volatility, and expected recovery, enabling informed decision-making and a **30% reduction in costs**
