Science	GCSE	C
Double Science	GCSE	C
History	GCSE	C

EMPLOYMENT HISTORY:

Push Gaming

55 Bartholomew Close, London, EC1A 7ES, UK

SOUND DESIGNER -

- My role at Push was to design all the SFX for their in-production games. Using Reaper as my main DAW for designing, but also Logic and Pro Tools for more technical tasks, my daily tasks would be liaising with game producers and designers to define and refine the audio aesthetic for each game. Once sign-off was confirmed, I would then implement these assets using GitHub and Studio Code, in tandem with Push's internal audio game engine Foxy, to experiment and tweak each SFX placement in the game. During the production, I would attend regular project meetings to ensure the game's production was on schedule and any changes that were needed could be worked on in the following week's spirit. Once the game's code was locked in, it would be at this point I would align with the Marketing department and deliver any sounds that were required for promotional materials.

Play'n Go

LABS Camden Atrium, Chalk Farm Rd NW1 8AH

AUDIO PRODUCER -

- My role at Play'n Go was to oversee the concept, production and implementation of all audio-related assets necessary over the entire production of the game.

Preproduction - Kick-off with the game designer and/or producer. Have an initial meeting to discuss the game's theme and design and align on an initial sound direction. Further refine the audio direction with the game designer/producer and then prepare an internal presentation to formally present my vision and ideas to the wider team for discussion and feedback. Once everyone is happy with the agreed upon direction, an official Brief and Specification document would be drawn up for the team's reference.

Production - Meet with the game's Front End Developer and discuss all game events and triggers. Meet with our external composers and

sound designers to discuss the game and its audio requirements; mainly music, sound design and voiceover. Then using internal milestone spirit deadlines, draw up an expected delivery schedule. When assets begin to be delivered, listen to and review, asking for revisions if necessary or green lighting and updating documentation to keep track of signed-off assets. Using PnG's internal audio implementation software (Audiomerger & Soundstage) implement the delivered audio and test in-game to check if all is working ok, if so, deliver that build to the FE Dev to build into the game. During the production phase this process is repeated throughout; constantly communicating with the composers and sound designers, the FE Dev and the game team, updating daily to ensure the audio delivery schedule and the game milestone deadlines are being hit. As the Master milestone approaches, thorough testing and implementation adjustments become the main focus and working with the FE Dev to resolve any issues that may occur during this period. When all issues have been resolved, I will deliver my final Soundstage build to the FE Dev for inclusion in the game's final build. If all has gone smoothly only final testing is required, then final sign off.

Postproduction - We will have a team retrospective to discuss the game and its production, trying to highlight areas where problems arose and brainstorm ways to improve on these for the next project. At this point I also align with the Marketing department and deliver any sounds that are required for promotional materials.

Gamesys

10 Piccadilly, London W1J 0DD

My day to day work at Gamesys includes sound design and music composition for their new release game trailers and online slot games. I also sound design, compose, master and edit their affiliated online brand ad campaigns for Virgin, Global Radio and Jackpotjoy. I also act as Live Sound Engineer at our company quarterly presentations, running the mixing desk, being responsible for audio monitoring and live streaming during the presentation, and all other audio related requirements.

SOUND DESIGNER & COMPOSER -

- **SFX & Music for Games:** Liaise with game producers to establish game audio direction and aesthetic during pre-production.

- Designing SFX & music to a very high standard. Constantly seeking feedback to check on progress with producers.
- When signed off - liaising with developers/programmers and delivering audio in correct formats and sizes.
- Working with both developers and producers to troubleshoot and make all final tweaks necessary.
- **SFX & Music for Trailers:** Attending all pre-prod meetings; working with initial story boards and animatics to establish ideas and direction.
- Produce all SFX & music for the trailer to a very high standard.
- Constantly liaise with producers on progress and feedback.
- Edit/mix/master trailer to a professional standard.
- Deliver exported/bounced stereo file to video editors for implementation.
- **SFX & Music for the JPJ, Virgin, Heart & Smooth Brands:** Working with Brand Heads to discuss initial ideas and direction.
- Working on and pitching various ideas to the Brand Heads.
- Collaborating with various Brand members to push and establish the direction for that campaign.
- Record, mix, master and deliver all necessary assets for the various media requirements. Responsible for final audio sign-off after implementation.

SOUND ENGINEER -

- **All Bingo Ventures - V.O Recordings:** Liaising with vocal talent, both internally and externally; organising recording sessions.
- Producing and directing talent to deliver required performance for product owners and producers.
- Editing/mixing/mastering all audio for delivery to developers/programmers for game implementation.
- **Company Quarterly Presentations:** Audio team lead.
- Focus point for all thing's audio on and in the lead up to, the event.
- Manage the audio team on the day, trouble-shooting any issues.
- Acting as F.O.H engineer on the day, mixing both radio mics and external sources for the venue.
- Constantly reviewing and researching better ways to improve the presentation from an audio point of view.

- Maintaining all equipment.
- **Sound Recordist:** Senior sound recordist - Virgin Games 'Live Signature Roulette' promo campaigns.
- Responsible for capturing all onset audio; mixing radio and boom mics. Backing up, file digestion and delivery.
- All post-production; responsible for editing.
- Working with senior brand managers to achieve desired final vision.
- Finalising and delivery of audio to video editors for implementation.
- Assistant sound recordist - Virgin Games 'Vlad' ad campaigns.
- Working with senior sound recordist to capture all onset audio from radio and boom mics.

Boost Music Publishing Ltd

57-58 Smithbrook Kilns, Cranleigh GU6 8JJ

Composer and Producer - Ongoing compositional work for their production and music libraries, albums, TV, film and online media projects.

Album Credits -

Seven compositions used on their 'Festival' album.
 Four compositions used on their 'Festival - The Piano Sessions' album.
 Three compositions used on their 'TV Tasters 2' album.
 Two compositions used on their 'Gadget' album.
 Two compositions used on their 'Festival 2' album.
 One composition used on their 'Relaxing Places, Open Spaces' album.

TV & Film Credits -

I've had many of my compositions used in TV and film on a wide range of productions. Here is a small example of where my work has been used;
 BBC - RHS Chelsea Flower Show, Virtually There.
 E4 - Made In Chelsea.
 RTEjr - Twigin'.
 Irish Film - Fair City.
 Australian TV - Bringing Sexy Back.
 Australian Film - Big Brother.

SyncTracks Production Music Library

Composer and Producer - My work involved composing new and original music to be used in their music library.

Credits -

Two compositions used on their 'Americana' album.

One composition used on their 'Positive Acoustic' album.

Jacob K Music

Composer and Producer - My work for Jacob K Music involved composing new and original tracks to be pitched specifically for the Asian J-Pop and K-Pop markets.

Tonestar Music

Composer and Producer - My main work here was to compose and produce original music which was pitched to record companies on behalf of up-and-coming artists.

Rhythm Rebel Music

Live Sound Engineer - My main duties here included organising and running the sound for live performance - Logistics, load-in and load-outs, setting up the P.A, setting the levels and monitoring the sound as the bands performed.

Julius Pep Composing

Freelance Songwriter, Composer and Producer - Writing original pieces of music for TV, Film and Media.

Other Information: Full driving licence.
