

Erico Azevedo

Developer

A highly motivated and results-oriented programmer with 4+ years of experience in the video game industry specializing in Unity development using C#. Proven ability to design, develop, and implement high-quality games for mobile, VR, and WebGL platforms. Expertise in rapid prototyping, tool development, and code maintenance within agile environments. Strong understanding of object-oriented programming principles including creational, structural, behavioral design patterns. And an understanding of architectural patterns, such as IoC and MVC.

Employment History

<u>Scriptic</u>	<u>Nov 2022 - March 2025</u>	<u>Trireme Insurance Group</u>	<u>Jun 2018 – Sep 2019</u>
Developer		IT Data Analyst	
<u>Kuato Studios</u>	<u>Jan 2021 – Nov 2022</u>	<u>RockIT</u>	<u>Jun 2017 – Jun 2018</u>
Unity Developer		Junior IT Support	
<u>Coda Platform</u>	<u>Sep 2019 – Jan 2021</u>		
Marketing Unity Developer			

Languages/Skills

- C#
- Python
- Unity
- Knowledge of Object-Oriented programming
- Experience in IOS and Android development
- Git
- Experienced in architecture patterns such as IoC (Dependency Injection) and MVC
- Tools Programming
- AI Programming
- Gameplay Programming
- VR game development

Projects

Scriptic: Crime Stories, Scriptic - Unity Mobile

An interactive story platform. As a detective, you play through different narratives by interacting with characters through dialogue, and searching through the characters' devices to find clues.

Responsibilities:

- Collaborated with the content team to create new interactive screens, including coding and building screens in Unity using assets from the UI/UX team
- Developed in-house content tools and updated the content pipeline to support localization
- Help implement free to play features
- Implemented a localization system, enabling the Netflix version of the game to be played in multiple languages
- Created tools to export game data for translation and customize the game's appearance based on the selected language (e.g., different fonts for different languages).
- Implemented features from Netflix SDK ensuring the project was compatible with the latest version of the SDK

Multiple Short Games, Kuato Studios – Unity, WebGL

Short educational games where the player interacts with the game using a microphone and says the action they want to perform. I've completed four of these games; each being a 1 ½ month project for which I have either worked as the solo programmer or the lead programmer.

Responsibilities:

- Implementing gameplay features, UI features, and voice controls
- Working closely with the Producer to ensure targets for our weekly sprints were met
- Working closely with the Art team to ensure that assets were imported in a manner that allowed easy implementation into the game

Marvel Hero Tale, Kuato Studios – Unity, Mobile

Marvel Hero Tale was being reworked when I joined Kuato. It received a complete overhaul in both UI and Gameplay.

Responsibilities:

- Implementing collectable features; this included gameplay logic so that collectables could be found in the game, UI logic that allowed the player to enter a certain menu to see all their collectables, and a tool that allowed designers to easily add the different collectables into the game
- Implementing several gameplay features
- Implementing UI features
- Refactoring old code so that they were more scalable

Disney Story Realms, Kuato Studios – Unity, Mobile

An educational mobile game where players can control Disney characters in different Disney realms and play in various minigames.

Responsibilities:

- Creating a custom tool that gave designers the ability to create sequences of actions off of animations or triggers
- Implementing gameplay logic for several mini-games
- Refactoring old code so that the code was more scalable

Education

BSc Game Technology, 2:1, Kingston University, 2017
