

Stefan Petrovic

+381 63 7682497 | crazysoccer1211@gmail.com | Belgrade, BG, Serbia | <https://linkedin.com/in/stefan-petrovic-34b3a8342>

Professional Summary

Experienced game developer with over 12 years of expertise in game design, backend engineering, AI integration, and web development. Specialized in developing real-time multiplayer games, optimizing game performance, and implementing scalable backend systems. Proven track record of delivering high-quality games, including puzzle, board, and card games, across platforms such as Unity, Unreal Engine, Cocos Creator, PixiJS and Phaser. Skilled in using cutting-edge technologies to create engaging user experiences and optimize multiplayer interactions. Passionate about continuously learning and contributing to dynamic teams.

Skills

Game Development: Unity, Cocos Creator, Cocos2dx, Unreal Engine, Phaser, Pixijs, Godot, Optimization(Memory , Asset , Shader)
Web Development: HTML/CSS, Node.js, AngularJS, React.js, Vue.js, Wordpress, Laravel, OWASP Web Security, Evilginx2
Database Management: MySQL, PostgreSQL, MongoDB, Redis, Database optimization, ELK Stack, Solr, Lucene, Beats, Fluentd
AI Integration: Dynamic Difficulty Adjustment (DDA), Reinforcement Learning, TensorFlow, PyTorch, OpenAI Gym, HuggingFace
Backend & Networking: ASP.NET, Python, Node.js, Express, Spring Boot, Go, Docker, Kubernetes, AWS, GCP, CI/CD, Kafka

Professional Experience

Nordeus

<https://nordeus.com/>

Belgrade, BG, Serbia

June 2021 - Present

Senior Game Developer

- Led development and optimization of mobile game systems for Top Eleven, Nordeus' flagship sports management game.
- Developed OAuth authentication for Apple and Facebook logins, improving user connectivity, security for millions of users.
- Ensured seamless backend architecture for real-time multiplayer features, optimizing performance and scalability for mobile.
- Implemented Elasticsearch(ELK) for logging, monitoring, and analytics, enhancing system observability and debugging.

Boke Technology Co., Ltd

<https://www.boke.com/en/>

Shanghai, China

June 2015 - May 2019

Game Server Developer

- Developed and maintained Poker Live City's mobile app and server, ensuring stability, scalability, and optimal performance.
- Built real-time multiplayer features with WebSocket, optimizing game logic, backend and database performance for scalability.
- Enhanced server efficiency by reducing latency, improving responsiveness, ensuring a seamless experience for global users.
- Designed and implemented a Card AI Bot utilizing Monte Carlo Tree Search (MCTS) with Alpha-Beta Pruning, optimizing decision-making strategies for competitive gameplay.

Zymr, Inc

<https://www.zymr.com/>

San Jose, CA, USA

January 2010 - December 2014

Mobile and Web Developer

- Built mobile apps with React Native, Flutter, and Swift/Kotlin, optimizing UI/UX for smooth performance across platforms.
- Led product development from ideation to launch, enhancing features for 10K+ users, collaborating on a monitoring system.
- Redesigned the internal tool UI, improving customer support efficiency and reducing response time by 8% for faster resolution.

Education

University of Vienna

Master's, Artificial Intelligence

June 2010 - June 2012

GPA: 5

University of Belgrade

Bachelor's, Computer Science

April 2008 - June 2010

GPA: 5

Certifications

Cocos Engine Contributor – Chukong Technologies, 2016

Unity Certified Programmer – Unity Technologies, 2023

Spring Professional Certification – VMware, 2020

Certified NFT Developer – Blockchain Council, 2024

Strengths

- **Enhancing Single-Player Games with Multiplayer and Competitive Features:** By combining my strengths in multiplayer systems design, real-time gameplay, dynamic difficulty scaling, and session management, I transformed a single-player puzzle game into a compelling multiplayer experience. This transformation boosted player interaction, engagement, and replay value.
- **Betting Mechanics for Strategy and Engagement:** My expertise in betting mechanics introduced strategy, excitement, and competition. Players could wager in-game currency, boosting engagement and creating a more thrilling and competitive experience.
- **Server Management for Concurrent Users with Scalability:** I ensured the game could handle a growing user base by implementing robust **server scaling** strategies, ensuring smooth performance during peak load times and minimizing downtime.
- **Database Tuning and Query Optimization:** By tuning the database and optimizing queries, I improved data retrieval times, ensuring fast and efficient player data handling, even with large amounts of concurrent users and minimal latency.
- **Problem-Solving:** Expertise in diagnosing and solving complex performance issues in both game development and backend architecture.
- **Teamwork:** Experienced in working within small, collaborative teams to quickly iterate on features and meet tight deadlines.
- **AI Integration & Game Design:** Specialized in developing AI-driven features like Dynamic Difficulty Adjustment (DDA) systems, which enhance player engagement and ensure fairness in gameplay.
- **Multiplayer Game Development:** Skilled in designing and implementing real-time multiplayer features, such as matchmaking, player interaction, and leaderboards, using technologies like WebSockets, Node.js, and Redis.
- **Continuous Learning:** Always open-minded and eager to learn new technologies and approaches to improve personal skills and contribute to the growth of the team.

Personal Project(Unpublished)

Play-On-Deck

20+ card and board games platform

- Developed secure, scalable platforms for card, board, and action multiplayer games like chess, Tetris, and basketball shooting.
- Enabled realtime multiplayer with WebSocket, ensuring low-latency gameplay and seamless interaction for global players.
- Integrated adaptive AI features, dynamic animations, and automated game mechanics for a unique user experience.
- Implemented failover systems for auto-reconnect and game resumption after connection loss, ensuring uninterrupted play.
- Added game replay system for players to save, review, analyze matches to improve strategy and engagement.
- Created Observer Mode for live match spectating, ideal for tournaments, community events, player interaction.
- Designed a scalable architecture supporting 100k+ concurrent players and 50k+ simultaneous games for smooth performance.

Interests

- **Sports Enthusiast:** I have a deep passion for sports, including swimming, football, basketball, baseball, and badminton. These activities help me develop teamwork, discipline, and a competitive spirit, which I apply in both professional and personal challenges.
- **Gaming Aficionado:** My love for both PC and mobile games keeps me immersed in diverse gaming experiences. Games like Clash of Clans, Warcraft, Dota, and Best Fiends fuel my creativity and strategic thinking, which translate into my work as a game developer. I enjoy tackling complex game mechanics and discovering innovative ways to enhance gameplay.
- **Reading Passion:** A fan of fantasy novels, I find inspiration and creativity through immersive storytelling. Authors like J.R.R. Tolkien and George R.R. Martin influence my approach to game narrative and character development, encouraging me to craft rich, engaging worlds.
