Professional Experience

Software Engineer / Associate Software Engineer (Red Hat — June 2022 – March 2025)

- Leading the delivery of ML models to edge devices and cloud, created E2E testing suite and automated the MLOps lifecycle.
- Created Kubernetes operators gaining experience in Docker and containers, integrating with existing tools and services.
- Developed tools interacting with RedHat APIs, SDKs (Python, Java, TypeScript and Go), CLI tools, and Terraform providers.
- Received a promotion to Software engineer in 2024.

Software Engineering Intern (Red Hat, Waterford — February 2021 – August 2021)

- Worked on Red Hat operators, added support for GCP, Redis, and PostgreSQL.
- Worked on performance testing using Jenkins and automation of RedHat OpenShift services.

Personal Projects

Game Engines

- Three small game engines in multiple languages including C++. Experimented with different technologies such as Raylib, OpenGL, Sokol, miniaudio, GLFW and the Win32 API.
- Created custom 2D renders, integrated level editors, hot reloading assets for faster development, multiple input support with gamepad and mouse and keyboard.
- Used a structured approach of game design for game prototypes focusing on multiple areas, scope, appeal and fun to create a core idea then expanded from there using the same approach.

Open Source Compiler

- Compiler written in C++ that transpiles a custom language into C++.
- Created a custom lexer, parser, type checker, and code generation backend. Intended to be used for existing C and C++ codebases as language is supported.

Skills

- **Languages:** Professional experience in Go, Python, Java, TypeScript. And extensive educational and personal experience with C, C++ and C#
- **Frameworks & Tools:** Unity, MSVC toolchain, Docker, Jenkins, Git, Terraform

Education

BSc. (Honours) in Applied Computing (Game Development) SETU Ireland— September 2018 – June 2022

- Graduated with First Class Honours.
