Personal Statement

Highly motivated and creative software engineer with 6 years of industry experience in programming. Eager to grow my career in software development, leveraging my strong technical skills and problem-solving abilities honed in my previous roles.

Key Skills

Functional Testing
Unreal Engine
Git
JavaScript

Unit Testing
Perforce
Agile Development
Web Development

C++
React
TypeScript
Client Communication

Work Experience

Freelance Test Engineer, Mastek, February 2025 - May 2025

- Freelance position creating a full set of unreal engine 5 functional tests for a client from scratch
- Taking sole responsibility for all testing work
- Advising on best practices for working on the product outside of testing
- Creating documentation to allow the tests to be maintainable after the contract has ended
- Working with an international team based both in the UK and India

Senior Engineer, Climax Studios, June 2024 - February 2025

- Working for a client on a large cross platform UE5 Project with a tight turnaround deadline
- Managing two junior engineers - this included regular check-ins and giving assistance where necessary
- A large part of the role was focused on gameplay and UI
- Gained experience using the unreal gameplay ability system

Mid Level Engineer, Magnopus UK/Rewind, April 2021 - June 2024

- Meta Horizon Project (Jan 2023 - June 2024)
 - A massively multiplayer project coded in typescript
 - Liaising with clients and internal designers to create the best possible product
 - A gameplay programming role that also included significant creative input
- OKO (April 2021 - Jan 2023)
 - This was an internal metaverse product that ran over a variety of different platforms and used cloud and VR technology
 - Focusing on the unreal side which included implementing features such as improving the menus, creating a video player and resolving bugs
 - Fixed the functional and unit tests as they were not running correctly which significantly improved bug detection

Junior Network Programmer, TT Games, April 2019 - April 2021

- Worked on "Lego Starwars: The Skywalker Saga" which ran on 5 different platforms and was made using a custom C++ and angelscript based engine.
- Implemented network code on all platforms including network related tools for the engine

Education

MSC Games Engineering, Newcastle University, 2017 - 2018 (Merit)

BSC Computer Science, Newcastle University, 2014 - 2017 (First)
