3D Prop Artist with experience working within an agile games development studio.

Further professional experience working in the Construction industry, tasked with creating technical CAD drawings as well as construction methodology visualisations.

Work History

3D Prop Artist

Infinity27 | April 2024 - July 2024

Role:

- Responsible for the creation of high-quality weapon assets for the "Samsara" project, employing a high-to-low poly workflow to meet stringent poly and texture budgets.

Achievements:

- Successfully developed optimised, high fidelity in-game assets, contributing to the project's visual and functional standards.
- Effectively managed remote work processes using Perforce for file management and Hansoft for time logging.
- Actively participated in scrum meetings, ensuring timely and efficient project progress.

Freelance 3D Artist

Freelance | July 2022 - Present

Role:

- Responsible for creating high-quality, game-ready 3D models for indie game studio clients, following industry best practices and technical requirements.
- Actively updating and improving portfolio to reflect evolving skill set, new workflows, and advanced capabilities in hard-surface modelling and photorealistic texturing.

Achievements:

- Proactively learned new software and techniques through personal projects and self-directed learning to become a more well-rounded and versatile artist.

CAD/Visualisation Technician

CECL-Global | October 2017 - September 2019 | July 2022 - Present (Intermittent Project Support)

Role:

- Lead CAD Technician responsible for creating technical, as-built drawings.
- Part of a small team tasked with creating high quality visualisations detailing complex construction methodology sequences.
- Returned to assist on a project basis during periods of peak workload.

Achievements:

- I worked effectively in an iterative manner, refining drawings to reflect ever-evolving designs.
- I carried out regular CAD audits to ensure my work met critical industry standards.
- Our visualisations were used effectively for clarity sake as well as for proof-of-concept of new ideas.

CAD/BIM/Visualisation Apprentice

Morgan Sindall Engineering Solutions Limited | August 2016 - October 2017

Role:

- Apprentice that worked closely with Senior CAD & Visualisation Technicians in order to learn and assist in the creation of technical drawings and visualisations.
- Drone pilot responsible for conducting aerial photogrammetry surveys.

Achievements:

- Assisted in the creation of countless technical drawings pertaining to large infrastructure projects across the UK for an array of clients, notably National Grid, Thames Tideway and TFL.
- Conducted an aerial photogrammetry survey - coordinated to Ordnance Survey Data - of a quarry that allowed for the creation of a highly accurate digital model that was then used to estimate the amount of material that needed to be excavated, better informing the overall design.

Skills

Hard-Surface Modelling: Advanced skills in hard-surface polygon modelling. Expertise in block-out, proportion establishment, clean topology and detailed refinement.

UV Mapping: Proficient in UV mapping, minimising distortion, and utilising UDIMs as needed.

Sculpting: Skilled in sculpting intricate details and forms beyond polygon modelling. Experienced in decimation and retopology using Quad-Draw in a high-to-low poly workflow.

Texturing: Capable of achieving near-photorealism by layering texture elements from scratch, with extensive reference use.

Look-Development: Competent in ensuring visual consistency between texture and render packages using look-dev software.

Rendering: Proficient in optimising render settings in Arnold and Marmoset Toolbag achieving a balance between quality and render times.

Education

BA. Visual Effects | First Class Honours

Norwich University of the Arts | September 2019 - July 2022

- My focus was on hard-surface modelling and photorealistic texturing.
- I worked effectively both individually and collaboratively, ensuring that my work was to a sufficient standards when collaborating with others within the pipeline.
- I wrote my dissertation on Photorealism and how it can be achieved. I researched the original Photorealist painters and their reliance on reference imagery - recreating distinctly photographic phenomena.
