Profile

Crafted the full audio identity of *TerraTech Worlds*, a large-scale physics sandbox and Steam Top 5 multiplayer title from initial design to final mix.

Built adaptive audio systems within Unreal and Unity, leveraging scripting (including C++ GameplayCue classes) for procedural sound design, real-time mixing, and custom event logic responsive to gameplay.

Managed the full audio pipeline from field recording and foley to integration and final mix while collaborating across disciplines to align sound with game design and narrative.

Experience

Sound Designer – Singer Studios (*Feb 2020 – Present*)

- Spearheaded the design and implementation of VR audio for the Emmy-nominated Pirate Queen feat Lucy Liu (Tribeca 2023 Winner, Raindance Immersive 2021 Winner), demonstrating expertise in spatial audio within VR.
- Created historically accurate, interactive soundscapes for *Trailblazer* feat. Daisy Ridley (premiering at Cannes 2025, *Venice Film Festival*, *SXSW*, *Sheffield Doc Fest*) integrating the sounds of the world's first car engine.

Technical Sound Designer - Deviant Games (*Dec 2024 – April 2025*)

- Integrated FMOD natively into Unreal's Lyra framework via custom C++ GameplayCue classes, enabling streamlined event triggers inside GAS.
- Engineered a networked, surface-aware footstep system with server-authoritative material detection and replicated multiplayer playback.
- Developed a multi-threaded occlusion & reflection system with threshold-based updates and mutex-protected raycasting to optimise spatial audio performance.
- Created dynamic material-driven audio adaptation and a Detector-Emitter system for FMOD, adjusting event parameters based on real-time line-of-sight and environmental surfaces.

Sound Designer – Payload Studios (*Aug 2022 – Nov 2024*)

- Designed & implemented the entire audio experience for *Terratech Worlds* & DLC for *Terratech* (*1M+ copies sold*).
- Developed procedural audio systems for vehicles, combat, hazards, and base-building in a modular, physics-driven game.
- Engineered a dynamic, parameter-driven soundscape, ensuring player-built bases & vehicles had responsive audio reflecting player choices.

Lecturer in Sound Design – Royal Holloway, University of London (*Feb 2019 – Aug 2022*)

- Empowered students to craft emotionally driven soundscapes for games, film, and interactive media. Graduates have gone on to work at nDreams, Final Pixel, and other leading studios as editors, sound designers, and technical artists, demonstrating a strong understanding of industry needs.
- Designed and led the 'Sound-to-Picture' curriculum, where students used Pro Tools, Reaper, and FMOD to explore narrative-driven sound design, blending creativity with technical precision.
- Built a 24.1 Ambisonic spatial audio facility, which I later transformed into a fully immersive spaceship escape room experience, allowing students to apply audiovisual storytelling techniques in an interactive sci-fi setting, a project so successful it was showcased at Shangri-La, Glastonbury Festival 2022.
