

BEN HUNT

Ever since a young age I have always wanted to make games, which led me down the path of studying Games Design at Brunel University. While there I learnt how to use Unity, using the engine to make various prototypes and games in various genres and using various pieces of technology, such as VR. After university I have since taught myself Unreal engine and C++, wanting to further push and challenge myself at every chance

For the past 8 years I have been learning how to program, starting originally with Python in secondary school, where I learned added skills myself online. This experience acted as the base for my programming skills, with it helping me understand C# and now C++.

Programming has also helped develop my other skills, such as working on group projects improving my communication skills within a team. Learning proper coding styles also helped improve my attention to detail, which follows on through other work.

skills	• Programming (C++, C#, Python) • Game engines (Unreal, Unity, Clickteam Fusion) • Source control (github and SourceTree) • Communication within a team • Managing deadlines
education	UNIVERISTY 2.1 in Games Design BA (Hons) Brunel University 2020 - 2023 A LEVELS BBC (English, Computer Science, Maths) Fortismere sixth form 2018 - 2020
experience	TESCO MOBILE SALES ASSISTANT - 2024 TO CURRENT Since 2024 I have been working as a sales assistant in Tesco mobile. This involves selling phone contracts and advising customers on mobile related issues. Through this role so far I have developed my skills further on communicating with customers, as many are older and need added patience and time. I have also learned more about working as a team, assisting other members to solve issues. GMTK GAME JAM - 2024 In 2024 I took place in the GMTK game jam in a team of five. Within the game jam I mostly did UI work within unity but also assisted with the core programming. During the jam I worked a lot with version control as well, using Sourcetree to share work between the group.

experience

GLOBAL GAME JAMS - 2021 TO 2023

Ever since 2021 I have partaken in three 'Global Games Jam', working with different groups in each one, with each jam resulting in a different genre of game. Through these jams I have worked on my teamwork and communication skills, as well as my timekeeping for tight deadlines, as we only had a weekend to complete the games. I also enjoyed taking part in them due to the opportunity to work on unique themes for each one, which challenges me to think outside the box with design and programming.

OXFORD STREET CHRISTMAS TEMP - 2023

In 2023 I worked as a Christmas temp for HMV at oxford street, where I learned a lot about how to manage large volumes of customers and deal with them in a professional and calm manner. I also learned how to use tills a lot more and the various systems, such as issuing refunds or processing gift vouchers.
