Personal Profile

As a Lead Game Designer at MOONBEAR LTD, I lead high-level designs across all departments, ensuring a seamless collaboration between the creative, technical, and development teams. With extensive experience across multiple game genres, including standard, live service, action/adventure, farming, cosy games, RPG, casual, puzzle, pet games, and first-person shooters (FPS), I oversee the full game development lifecycle from concept to launch. My main responsibilities include designing engaging gameplay mechanics, systems, and customisations, as well as making design documents and technical changes in the game engine. Additionally, I assist with coding, modelling 3D assets, producing concept art, and conduct playtests when needed. I also drive the creation of new updates and manage game assets, while maintaining a focus on delivering polished, high-quality experiences that align with the company's goals.

I graduated with an Bachelor's Degree in Games Design at University of the Arts London, one of the top design and media universities in the world. This has enabled me to enhance my game design skills through the use of programs used in game development, and has strengthened my attention to detail.

Skills

Professional Skills and Experience:

- **Full-Cycle Game Design:** Over 6 years of experience leading game designs from concept through launch and post-launch. My expertise includes designing game mechanics, systems, events, customisations, and various other in-game features.
- **Systems Design:** Proficient in designing core game systems such as progression mechanics, reward structures, player controls, accessibility options, and user interface design.
- **Multi-Genre Design Proficiency:** Experience designing for a diverse range of genres, including casual, adventure/action, puzzle, RPGs, first-person shooters (FPS), sandbox games, pet simulations, farming simulators, competitive shooters, and more.
- **Live Service & Free-to-Play Expertise:** Extensive background in designing standard and live service games, including battle passes, cosmetic systems, retention events, player lifecycle management, and more.
- **Game Engine Experience:** Good knowledge of Unity (2D/3D) and working knowledge of Unreal Engine, with experience in using both game engines to support game development and make adjustments to games.
- **Visual Design & Asset Creation:** Expert-level proficiency in Photoshop, with experience using Blender and 3DS Max for 3D modelling and technical adjustments. My experience also includes creating concept art, pixel art, UI mockups, 3D models and character designs.
- **UI/UX Design:** Strong background in designing intuitive user interfaces, in-game HUDs, menus, and iconography that prioritise usability, clarity, and aesthetic alignment. My experience in this department also includes sorting complex features into categories that players find easier to navigate.
- **Player Psychology & Data-Driven Design:** In-depth understanding of player motivation, behaviour, and engagement. My experience includes analysing player data, behaviour, and feedback to enhance gameplay and player experiences.
- **Team Leadership & Collaboration:** Proven ability to lead teams and collaborate with the founder, freelancers, translators, and coders, making sure all features align with the creative vision of the game.
- **Publishing & Community Management Tools:** Strong experience with platform tools such as Google Play Console, Apple Store Connect, Steam/Steamworks, and Discord, overseeing game launches, updates, and community engagement.
- **Communication & Production Support:** Strong written and verbal communication skills, with experience in documentation, copywriting, translation document creation/management, and database management.

Work Experience

Lead Game Designer - MOONBEAR LTD (23/01/19 to present)

I currently work as Lead Game Designer at MOONBEAR LTD, a game development company. In this fast-paced and high-pressure role, I am responsible for driving excellence in game design, including the creation of game concepts, design documents, system designs, and gameplay mechanic designs. Additionally, I oversee game testing and ensure the overall quality of the design process. Beyond my contributions to ongoing successful titles, I designed over 400 features for Pocket Build, a sandbox game that has amassed over 5 million downloads globally on Google Play and the App Store, and was featured on the App Store homepage. My ability to lead large-scale feature development and maintain a high standard of creativity and technical quality has played a key role in the company.

Freelance Digital Artist (2/1/17 to 23/01/19)

My art style is flexible and ranges from digital painting to pixel art. As a freelance artist, I constantly aimed to improve by taking on commissions and exploring new ideas. This position required me to anticipate client needs and deliver intuitive and highly personalised solutions. This usually means including features that appeal to each individual client based on their description of their desired commission. Having taught myself Photoshop during my secondary school years and combined this with professional development, I gained exceptional knowledge of the program and now use it regularly alongside other design software.

Administrator and Sales Assistant - British Heart Foundation (25/9/14 to 19/6/16) and Primark (23/6/16 to 2/1/17)

I worked as a Shop Assistant and Administrator at The British Heart Foundation and Primark, where I supported management with daily operations, including stock and financial management. In these fast-paced roles, I provided excellent customer service, handling both customers and challenging situations with professionalism and composure. These experiences enhanced my ability to collaborate effectively with supervisors, staff, and customers, ensuring quality service.

Shop/ Farm Assistant - Vauxhall City Farm and Pets At Home (10/2011)

Volunteering at both Vauxhall City Farm and Pets At Home taught me a variety of valuable skills, as well as animal care. While looking after animals and assisting visitors, I honed my listening and communication skills, ensuring that both animal welfare and visitor satisfaction were prioritised. These experiences helped me develop a strong sense of responsibility, attention to detail, and the ability to work effectively in both of these team-oriented environments.

Teaching Assistant: Saint Anne's Primary School (10/2011)

In addition, I worked at Saint Anne's Primary School as a teaching assistant, monitoring the children and assisting them during lessons. This position required me to react and adapt quickly to new requirements and processes in a fast-paced environment. Working at the school also increased my leadership skills, and I had to speak clearly and considerately in order to gain the children and teacher's attention and understanding in a busy environment.

Education

- **University Of The Arts London: October 2014 - July 2017**

Second Class Honours Degree in Games Design.

- **La Retraite RC High School and College for Girls : September 2008 - July 2014**

7 GCSEs from grades B to C in English Language, English Literature, Maths, RE, Art, and Information Communications Technology, as well as a pass in BTEC Information Communications Technology at A Level.

Awards

I have won a variety of awards. In 2007, I won Best Design award for a Christmas card design competition. This was shown to the Queen of England and used as the official Christmas card illustration of that year. I came joint first against applicants from hundreds of schools across London, and was rewarded a private tour of the Houses of Parliament. In Secondary school, also I received an award from Vauxhall City Farm for my performance and work ethos during my work experience there, was made employee of the month and was even offered a place for permanent work.
