

Juan Andrés Nin

Programmer

Montevideo, Uruguay • ninbolin@gmail.com • www.nin.com.uy

I'm a programmer and game designer with 13 years of professional experience.

I started making games when I realized Half-Life 1 shipped with a copy of WorldCraft and ever since I wanted to work as a game developer.

I've ported games from mobile to PC and from PC to Xbox, worked on custom engines with C++ and using C# with Unity. In my time as a game programmer I have worked in multidisciplinary teams defining game asset pipelines as well as designing game content and implementing it.

Work history

Contract programmer

April 2024 - Present

MicroProse

- Worked as a programmer in the early access game Silent Depth 2: Pacific, implementing new UI for the whole game, controller support, gameplay features as well as bug fixing.
- Worked as a programmer on the game Strategos helping implement a map campaign game mode as well as reworking all of the game mode's UI.

Co Founder, Programmer, Game Designer

March 2020 - Present

TragicoMedia

- Programmed, co-designed and co-wrote Tourist Trap, a 2d surrealist dark comedy point & click adventure using Unity.
- Ported Tourist Trap to Xbox handling all of the certification process.

Lead Developer

Ironhide Game Studio

February 2012 - December 2021

- Ported Kingdom Rush from iOS using cocos2d and Obj-C to PC using Unity and C#.
- Worked alongside artists and designers on multiple content updates as well as maintenance for the Kingdom Rush franchise.
- Worked on a team of three programmers making a new engine using C++ and cocos2d-x for Kingdom Rush Vengeance. This engine runs the iOS, Android and PC versions of the game. Worked alongside artists and designers on the original campaign, UIs, localization system, achievements and in app purchases system.
- Ported an internal animation system, used to reduce memory usage, from Unity using C# to a custom C++ engine.
- Assisted localization efforts for the Kingdom Rush franchise.
- Became lead programmer after Kingdom Rush Vengeance's release working on content updates as well as maintenance.
- Adapted Kingdom Rush Vengeance and its content from a premium model to Google Play Pass.
- Worked on Junkworld as Lead Programmer, managing two other programmers, from prototype stage onto its soft launch on Android. Helped define a new pipeline for level creation using Tiled working on its integration in cocos2d-x. This helped greatly reduce artists and designers workload during level creation making it possible to make a lot of levels with few human resources. Worked alongside artists to create a color grading system to easily achieve different settings for the same base level. Implemented Android services to the game as well as Crashlytics, remote configuration using firebase and analytics solutions.
