

Jose Miguel Casas Pagan

Technical Artist — Pipeline & Tools · Shaders & VFX · VR · 10+ years

[linkedin.com/in/josemcasasp](https://www.linkedin.com/in/josemcasasp)

PROFILE

Technical artist with 10+ years of experience across AAA, indie, and VR — from building Unity VR projects at SolidVirtual to Wargaming's World of Tanks, Illuvium on Unreal Engine 5, and console development at Grip Digital. Specialises in pipeline tooling, DCC automation, real-time shaders, and performance optimisation. Equally comfortable writing Python scripts, C++ systems, or HLSL shaders.

SKILLS

DCC	Houdini · Maya · Blender · Substance Painter
Engines	Unreal Engine 5 · Unity · Unreal Insights
Languages	Python · C++ · HLSL / GLSL
Focus	Pipeline & Tools Dev · Shaders & VFX · VR Development · Performance Optimisation · Console (PS5)

EXPERIENCE

Technical Artist Grip Digital	Jun 2025 – Present
— Full technical art scope on an unannounced PS5 title — pipeline tooling, exporters, and shader development — Console-specific performance work within tight PS5 hardware constraints	
Technical Artist Illuvium	Jul 2022 – Jan 2025
— Built exporter pipeline covering Substance Painter, Maya, Blender, and standalone Python apps — Developed Unreal Engine 5 Editor tools to accelerate the art team's daily workflows — Owned performance optimisation across the project using Unreal Insights	
Technical Artist Wargaming	Jun 2020 – Jul 2022
— Led the Prague office Technical Art department — cross-team coordination across WOT art and international TA teams — Involved in hiring, mentoring, and overseeing Junior Technical Artists and Junior Artist interns — Worked with QA for performance analysis and map optimisation — Built Maya and Blender environment pipeline toolset (validators, exporters, Havok setup, QA) with PyQt5/Python — Developed HDA tool for managing Houdini Digital Assets inside Maya via Houdini Engine with SVN integration — Created VAT building destruction simulations in Houdini for World of Tanks: Heat	
Technical Artist SolidVirtual	2015 – 2020
— Technical art and development across multiple Unity VR projects over five years — Real-time performance optimisation for immersive VR experiences	

SELECTED PROJECTS

01 World of Tanks

Environment pipeline tooling — Maya & Blender validators, exporters, and Houdini destruction simulations supporting the live AAA title.

Wargaming · Houdini · Maya · Python

02 World of Tanks: Heat

Continued environment automation and asset pipeline work for this upcoming AAA title, expanding DCC toolset across Blender and Maya.

Wargaming · Blender · Pipeline

03 Illuvium

Led cross-DCC exporter tooling and built UE5 Editor tools. Responsible for performance profiling and optimisation across the full project.

Illuvium · Unreal Engine 5 · Python · Unreal Insights

04 Unannounced PS5 Title — Grip Digital

Full technical art scope including pipeline tools, shader systems, and hands-on PS5 game development.

Grip Digital · PS5 · C++ · Console

05 VR Projects — SolidVirtual

Technical art and development across multiple Unity VR experiences. Five years building real-time immersive projects with a focus on performance.

SolidVirtual · Unity · VR
